

Assignment – Day 1

1. What specific interventions can you suggest to a client to prevent HIV transmission to another adult? To an unborn child?
2. A client comes for VCT and tests HIV negative. What does that negative test mean?
3. You have an HIV+ man who qualifies for therapy, but he cannot afford it right now.

What CAN you do for the patient regarding his HIV care?

What can you suggest for keeping himself healthy in the meanwhile?

4. What is the definition of an opportunistic infection? What are some ways to prevent them? When a patient has them, what does that mean about their immune status?
